APGII - Advanced Pedestrian Guidance

The APG II is the latest addition to Lawrence Metal Products line of "Advanced Pedestrian Guidance" systems. Designed to put safety first, the APG II has been developed to efficiently guide both arriving and departing passengers to and from the airport terminal, away from potentially dangerous areas on the ramp including under-wing and fueling areas.

Setup is simple as the APG II can deploy within 45 seconds requiring only one person to operate. Simply use the hand wound mechanism to deploy two independent reels of retractable webbing with up to 75' of Anti-Static webbing. If needed the APG can be extended in two directions, easily connect it to the stairs of the plane using a plastic connector and create a highly visible guidance system.

Specifications

Footprint: 15.43" x 21.50"

Height: 3' 5"

Weight: 132.28 lbs concrete base

Features:

- > High Visibility yellow finish complete with reflective strips for perfect nighttime view
- > Simply use hand wound mechanism to extend webbing up to 75'
- > Locking spools for webbing keep barrier perfectly in place
- > New Compact design makes APG II easy to move
- > Fully steel frame including zinc undercoat for extra weather protection

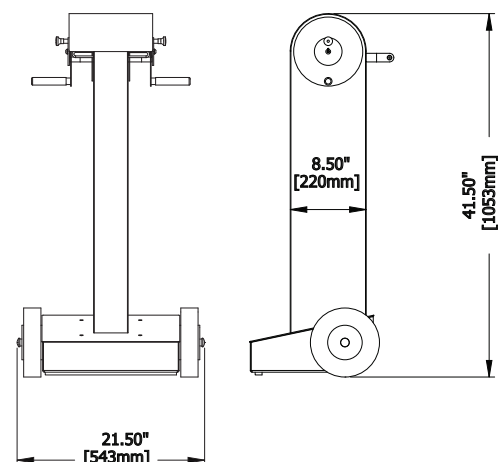

Benefits:

- > Create a physical barrier to restrict passenger's, further ensuring safety
- > Cost effective
- > Easy usage only one person required for operation
- > Save storage by eliminating multiple posts

The APG II is exclusively designed for the airline industry.
